

Abstract

The invention relates to a driver's cab (1) for a utility vehicle (2), with a supporting structure (3) on which a door (5) mounted on a door frame (4) is arranged on each side of the vehicle. It is essential to the invention here that the door frame (4) and the door (5) form a preassemblable door module (6) at least on one side of the vehicle and that the supporting structure (3) is prepared for the mounting of the door module (6) and that, in the mounted state, the door frame (4) is secured on the supporting structure (3).
